

U45 Insulated Sectional Overhead Doors

Combining attractive appearance, energy efficiency and robust construction with ease of operation, the **U45** Insulated Overhead Door is ideally suited to meet all of today's needs for an industrial door. Incorporating high density polyurethane foam filled sections with full perimeter sealing the **U45** will provide both thermal and acoustic performance significantly better than the levels required by Building Regulations

The **U45** Overhead Door is available in a range of over 20 standard colours all with long life finishes like Polyester or Plastisol also there is an option for a painted finish in any of the RAL Classic range of colours.

One of the main advantages of the **U45** sectional overhead door is its ease of use compared to other types of door. To further speed opening and closing and so reduce heat loss, limit staff involvement electric operation is simple to add at any time

Track System

The position of the door in a building may require that a specific track configuration is used to optimise the free space above the door. We recommend that the space between the door tracks and the roof is kept to a minimum (exact dimensional details available www.avondoors.co.uk)

Installation

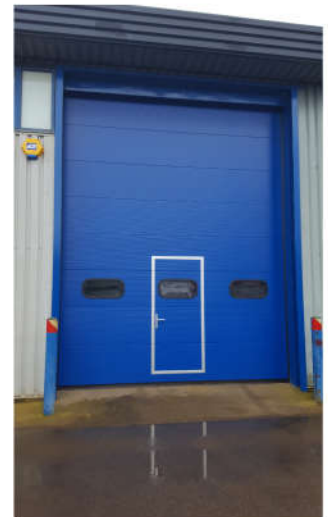

All installations are completed by Avon's own qualified engineers, who are equipped with all the necessary tools, generators & scissor lifts to complete any project. We also offer a full repairs & maintenance service.

Options

Electric operation	Glazing types
