

WICKET DOORS

FOR ROLLING SHUTTER DOORS

Wicket Door open for access.

Access through a doorway occupied by a rolling shutter is often a cause for concern, especially when there is no alternative route. The use of a "Wicket Door" is an accepted option but one that is frequently overlooked because of the inherent problems created by this type of door in the past. We have engineered our wicket door to be easy to use at the same time eliminating the weaknesses in other manufacturers products. Our wicket door is produced from high quality precision profiled steel sections, has a welded construction and is painted as standard in an epoxy grey paint. The inner outward opening leaf is infilled with 75mm galvanised interlocking lath to match the rolling shutter curtain and is fitted with a yale type cylinder and rim latch. The outer frame comes with 2 heavy duty hinges and pins for attachment to the wall or door guide and includes a **unique self clamping cam and handle set** that gives the user a "quick" release or locking action enabling the whole wicket door and frame assembly to be hinged quickly away from the door way to allow operation of the rolling shutter.

Wicket doors are available in 2 stock sizes and we are also able to offer manufacture of special sizes if required. There is a range of options for the wicket door, some of which are listed below.

OPTIONS

- Emergency escape hardware
- Polyester powder coat finish
- HP200 Plastisol infill
- Micro switch for use on electric shutters
- Letter box
- Security locking

Wicket Door with frame hinged clear to allow operation of Rolling Shutter.

Wicket Door in secured position.
